REDUCES MANUAL OPERATIONS BY

PAYROLL PROCESSING

CONVENTIONAL METHOD

COMPU-TRONIC* METHOD

PAYROLL WRITING

Advantages

Simplifies pre-payroll and payroll writing operations... reduces operation decisions... promotes speed, efficiency, and economy.

Eliminates 58 $\frac{1}{3}$ % of the time consuming and costly operations found in conventional systems... shortens the time required to perform pre-payroll and payroll writing operations.

Eliminates delays caused by:
 numerous pre-listing operations
 transposition of amounts
 incorrect reading of calculator dials
 incorrect reading of charts
 erroneous mental calculations

Provides accurate updated records... facilitates quarterly reporting and year end W-2 processing.

etc.

National's Compu-Tronic is specifically designed with accounting in mind. Its many distinctive features *Multiply* the flexibility which has won for The National Cash Register Company the distinction of being known as the manufacturer of "The World's Most Versatile Accounting Machines."

- * **Electronic Computation** may be program or manually controlled... separate Program Bar provides complete control over Factor Selection, Calculation, and Reading of Product... keyboard controls permit calculation independent of program control.

* Complete Alpha-Numeric Facility

Full Numeric Keyboard invites speed and accuracy without need for specialized training...

Electric "Alpha-Keyboard"—essential for complete accounting—provides full description facilities without duplication of effort or need for auxiliary equipment.

- * **Electronic Speed** permits "split-second" calculations without restricting or reducing the efficiency of the basic accounting functions.

* Complete Variable Program Controls

Removable Program Bars provide complete flexibility... permit mechanization of all accounting records—compatible with full automation...

Instant Simultaneous Access to all memory units (totals), and electronic commands provides flexible input, computation, and readout ability.

- * **Electronic Self-Checking Feature** automatically proves product calculation, assures greater accuracy, promotes efficiency, and increases the reliability of accounting information.

* Complete Direct "Single Key" Reverse Entry Control

Instant Memory Unit Reversal provides fast, accurate correction of erroneous postings and reversal of accounting entries... ALL WITHOUT HAVING TO DETERMINE WHICH MEMORY UNITS ARE TO BE AFFECTED...

Simultaneous Reverse Entry Symbol provides definite identification of all reverse entries.

- * **Electronic Interrogation** of memory units provides the ability to automatically transfer amounts from the left side of a memory (or numeric keyboard) to the right side of a memory... permits programmed introduction of a series of factors, variable or constant... increases the versatility of accounting functions.

* Complete Automatic Memory Unit Readout

Automatic Positive, and Negative Balances provide speed and accuracy without thought or effort by the operator...

Automatic Accumulated Memory Readout establishes definite control over report totals...

Electronic Memory permits automatic multiple calculations to be made involving constant factors.

- * **Electronic Erasure of Factors**—introduction of new factor automatically erases previous factor—eliminates need for separate clearing operation... provides speed and accuracy... contributes to accounting economy.

* Complete Visibility

Full Visibility of previous entries and posting area contributes to neatness... simplifies record insertion, and encourages more accurate alignment...

Visible Program Index permits prompt verification of program selection... guards against improper entries being made to accounting records..

Positive Visible Index Pointers—designating where alphabetic and numeric printing will occur—simplify operator training and encourage more accurate column selection.

- * **Electronic Decimal Pointoff** provides correct punctuation with automatic "round-off" of the product.

These and other features—fluid drive carriage, split platen, activity counters, variable dates, automatic carriage opening and closing, etc.—provide the posting *speed, efficiency, dependability, and accuracy* for which "The World's Most Versatile Accounting Machines" have been acclaimed.
